Attorney Docket No.: 20979-001910US

DEVICES AND METHODS FOR TREATMENT OF ABDOMINAL AORTIC ANEURYSM

ABSTRACT OF THE DISCLOSURE

Devices and methods for treating aneurysms, such as abdominal aortic aneurysms ("AAA") generally include one or more stent-graft devices. Some embodiments include self-expanding and/or balloon-expandable stent components and one or more graft components coupled with the stent components. Using various combinations of self-expanding stent members, balloon-expandable stent members, graft members, and/or anchoring members enhances the anchoring abilities of a stent-graft device to prevent leakage around it, and may further allow the device to be adjusted after placement at a site for treatment. Some embodiments further include a skirt graft member for further prevention of leakage and/or device slippage.
